1 Remove the screw from the ECM docking tray cover.

2 Place the ECM guide rails over the corresponding guides on the rear of the IDS Display and then slide it back toward the docking connectors. Visually inspect it to make sure it seated completely.

3 Use a screw driver to tighten the ECM security screw (hand tight only). The security screw must be installed to ensure the ECM does not come out inadvertently.

4 To remove the ECM, power down the system and loosen the security screw.

Gently pull the ECM out by the handle while supporting it on the bottom side to ensure it doesn't fall during removal.

Some third-party VESA mounting systems may interfere with installation or removal of the ECM. The ECM kit includes a set of 15mm spacers, 35mm spacers, and longer mounting screws to aid in adding additional clearance between the VESA mount and the ECM. Additional screw lengths (not included) may be required depending on the mounting system. Do not block any air venting on the ECM or IDS display.

Elo low-profile wallmounts (See [elotouch.com](http://elotouch.com) for P/N) does not require these spacers or screws when using an Elo ECM.
