

EasyDL 2.0

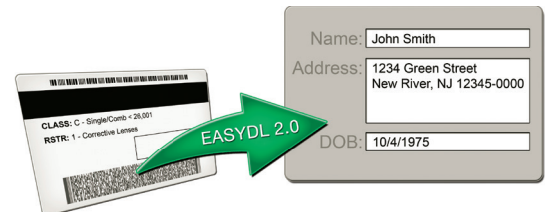

TotalFreedom Plug-In

Honeywell's EasyDL™ 2.0 software plug-in parses bar code data found on US and Canadian government-issued driver's licenses, identification cards, and U.S. military ID cards for applications involving age verification or automatic electronic form population.

Powered by Honeywell's TotalFreedom™ open-system architecture, which was created to enable development for Honeywell area-imaging scanners, EasyDL 2.0 eliminates the need for host system software to process the encoded information contained within the barcodes on documents such as driver's licenses and state and military-issued identification cards.

EasyDL 2.0 can be purchased pre-installed on the Xenon family of scanners and also on Voyager® 1400g2D and 1400gPDF area-imaging scanners. It can also be purchased as a standalone upgrade that can be added to Vuquest™ 3310g, Stratos™ 2700, Genesis 7580g, as well as on pre-purchased Xenons or Voyager 1400g units. Our easy-to-use configuration utility enables users to transmit any of the available data fields in any order chosen. The fields can then be separated by selecting any of the available delimiters, to provide the desired output format.

Enhancing Honeywell's barcode scanners with EasyDL 2.0 is an ideal solution to improve accuracy, increase efficiency, and reduce the liability involved with selling age-restricted products.

Compatible with the following products:	
	Xenon family of scanners
	Voyager 1400g2D and PDF
	Vuquest 3310
	Stratos 2700
	Genesis 7580g

Features

- **Reduces Transaction Time by 96%:** It takes the average customer 45 seconds or more to enter license data by hand. EasyDL 2.0 achieves the same result in the second it takes to scan an ID's bar code.
- **Eliminates Data Entry Error:** On average, 1 error is made for every 20 words typed. EasyDL 2.0 eliminates these costly errors by automatically populating electronic forms.
- **Reduces Liability:** EasyDL 2.0 takes the guesswork out of age verification, reducing the liability of selling age restricted products to under age purchasers.
- **Achieves Regulatory Compliance:** Comply with HIPAA patient confidentiality rules and other state and federal regulations regarding the acquisition of personal information, by simply configuring EasyDL 2.0 to remove sensitive information from being transmitted to the host system.

EasyDL 2.0 in Action

Use EasyDL 2.0 in a wide variety of industries such as retail, healthcare and financial services to quickly and accurately populate an assortment of forms including:

- Employment applications
- Bank account applications
- Patient admittance forms
- Registration forms
- Loyalty program/membership applications
- Credit applications

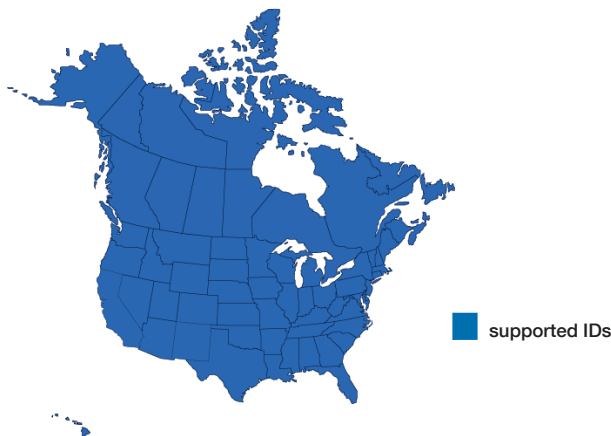

Automatically populate electronic forms in a single scan

Supported IDs

United States Driver's Licenses	All states* <i>* Not able to parse pre-2008 encrypted Georgia driver's licenses.</i>
Government Issued IDs	US Military ID Common Access Card (CAC)
Canadian Provincial Driver's Licenses	All

Please note that this item is currently only available in the US and Canada - compliance for more countries coming soon.

Formatting Options

Fields can be output in a variety of user-configurable formats, e.g.: dates, postal codes, height, gender

First Name
Middle Name
Last Name
Date of Birth[†]
ID Expiration Date[†]
ID Issued Date[†]
Address
Address1
City
State
Postal Code
Height

Weight
Eye Color
Hair Color
Sex
ID Number
Class
Restriction
Endorsements
IIN
Duplicates
Organ Donor

[†] Date fields can be transmitted in a variety of output formats.

Field Delimiters

We support all of the first 127 ASCII characters
